

# GEOKNOW- USER MANUAL

FOR YOUR NATURE NEEDS

GeoKnow is a fictitious, non-profit organization, with the goal of providing information about South Africa's nature reserves, protected areas and conservation ecology. The idea behind GeoKnow is to provide users with information of the natural beauty around them and provide directions in order to traverse South Africa's terrain such that anyone can get anywhere.

## ArcGIS Web App Builder & Web Map

Title: 22913998\_713A1

Please note, both the map and web app have the same name.

## TOOLS & FEATURES

The following list of tools can be found in the side bar tab

### ADDING DATA

- Users are given the option to freely add any data whether it comes from a URL or file. You can simply add the data layer to the map and have it be completely editable for your viewing pleasure.
- Along with adding different layers, the BaseMap option is also available in order to view the various base maps available through Esri Basemap gallery.

### LAYERS LIST

- Here users have access to all the current layers being displayed within the map.
- Useful for identifying and understanding the symbology used throughout the map and aiding in the discovery of locations and features.
- As layers are added to the map, the layer list will automatically update and account for the new layers.

## LEGEND

- Similar to the layers list, the legend tab provides the view with a detailed look of the legend provided. As the user moves to different extents, the legend automatically updates to provide as much relevant information as possible.

## PRINT

- The print function is a simple tool which allows user to print an image of the map set to their current viewing extent.
- Simply, zoom to your extent of preference and select the print tab to get a printable pdf of your extent.

## ABOUT

- The about tab provides some background info of GeoKnow along with its logo and slogan

## TOOLS & FEATURES CONTINUED...

The following interactive tools can be found on the map.

## HOME

- The tab with the image of a house, provides the user with a means to zoom to a default extent, set to a total extent of the country in order to provide a good over start point for the user.

## ZOOM

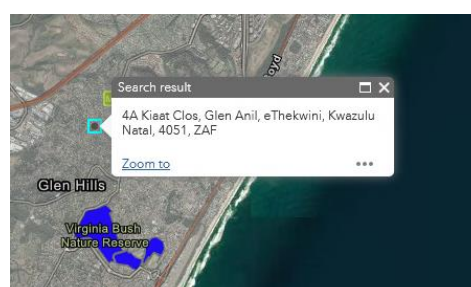

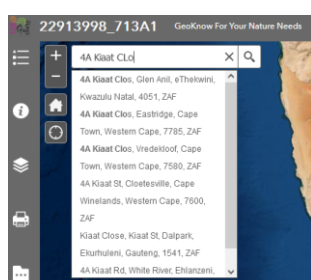

- The plus and minus options provided above the home feature can be used to zoom the extent in and out respectively
- Other ways of zooming can be through using the mouse or touchpad if the user is working on a laptop/computer, or by using your fingers to zoom in if the user has the application on a mobile device.

## ZOOM TO YOU

- Found below the home tab, the zoom to you feature, first asks the user for their current location through google's GPS link and then zooms to the exact location of the user's device.
- Useful for locating yourself with reference to the nature reserves.

## SEARCH

- As seen in the screenshot to the right, the search tab can be used to find any location and take the user to a zoomed in extent

## DISTANCE AND DIRECTION

- The first tab found below the search bar and next to the Home tab, is the distance and direction tool.
- Here, the user can set, type, search or simply drop a pin at a start location and select an end location.
- Next, they can set the mode of transport as well as any additional stops
- The directions tool provides the user with the most efficient means of getting to their location and provides an estimated travel time and direction.
- Along with the appropriate names of each road, intersection and freeway they will be travelling along

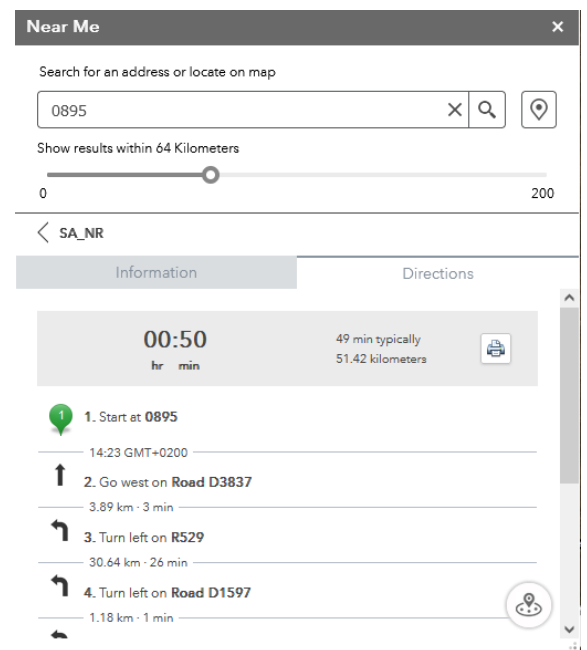

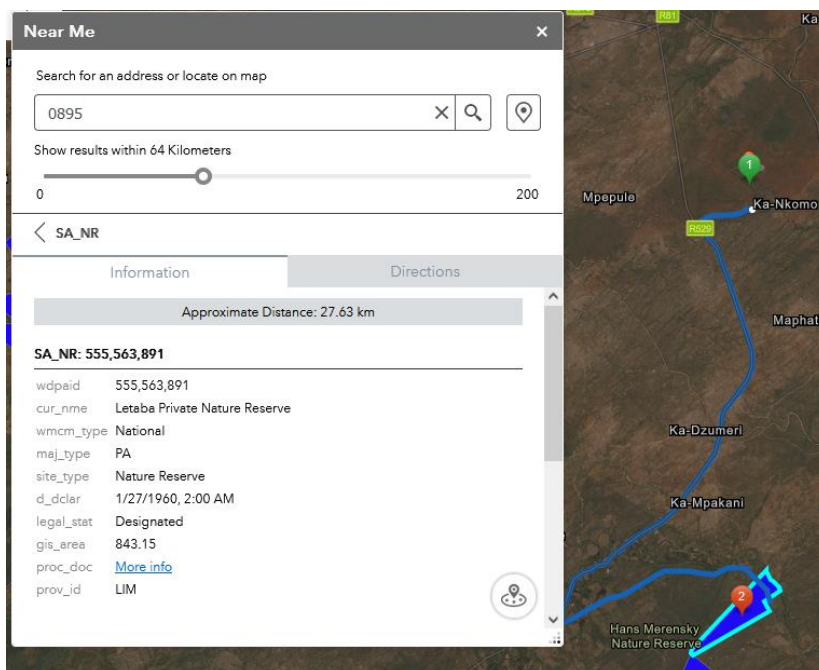

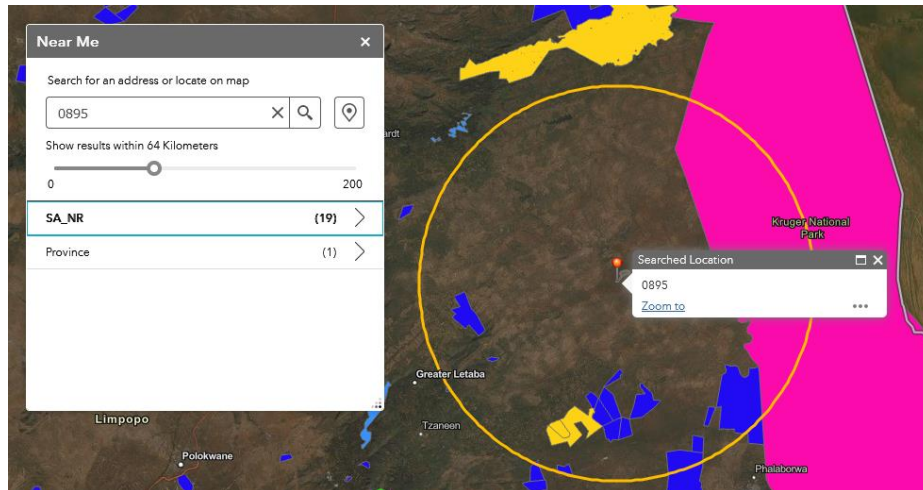

The screenshot displays the Google Maps 'Directions' panel. On the left, the start location is 'City Varsity' (green pin) and the end location is '5608' (red pin). Below these are icons for walking, driving, and transit, with 'Driving Time' selected. A 'LEAVE NOW' dropdown and an 'OPTIONS' link are also visible. A large blue button says 'GET DIRECTIONS' and a smaller one says 'CLEAR'. At the bottom, the estimated travel time is '11:26' (hr min) and the distance is '11 hr 42 min typically' and '999.09 kilometers'. On the right, a list of 9 steps provides turn-by-turn directions, including starting at City Varsity, going southeast on Roeland St, continuing on De Waal Dr, bearing right on M3, continuing on M3, taking exit 387 to merge onto N2 toward Muizenberg, taking exit 797 to merge onto N2 toward Grahamstown / R72 / Port Alfred, and finally continuing forward on Cathcart St N2.

- The above images provide a simple explanation of what can be expected when using the directions and distance tool.

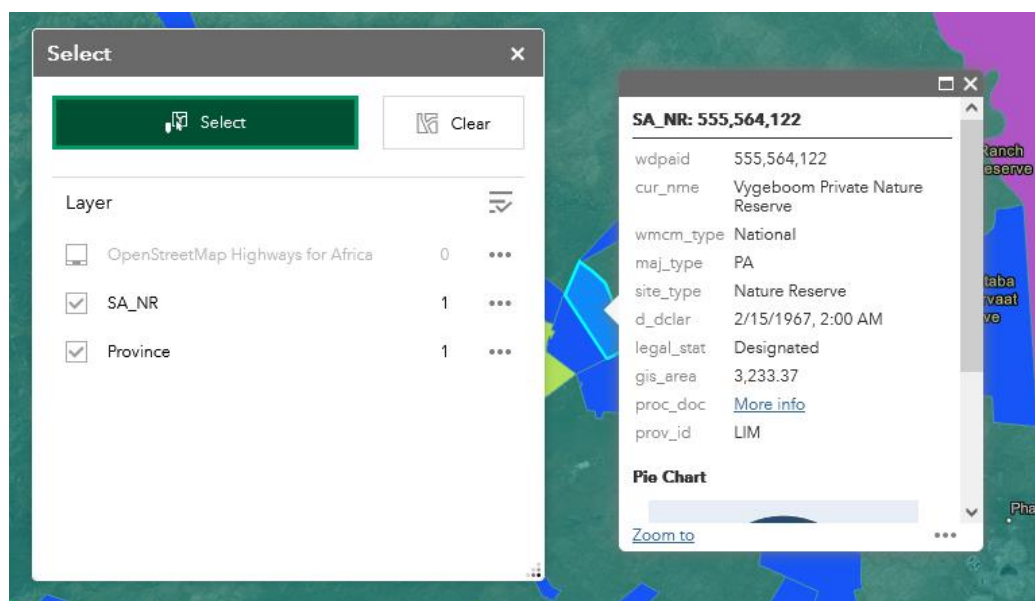

## NEAR ME

- Located to the below the search bar and in the middle of the three widgets.
- The near tool acts as a guide for users to understand their surroundings.
- By simply clicking on the tab the users will be asked to enter an address or simply drop a marker wherever they choose, this can also be set to your current location.
- Next users will be asked to set a search radius, the default is set to 20km however, users can decrease or increase this radius to 200km in order to understand what is around.
- Once search is selected the tool locates all the information within the set radius and provides a pop up of the information as well as directions, distances and time to travel for any feature identified.

## SELECT

- The last tool found to the right of the near me is a simple select tool which allows users to simply select anything and provides as much information back to the user as is available.

## ATTRIBUTE INFO

- The final tool available is that of the attribute info table which can be accessed through the pop up tab found at the bottom of the map, in the footer.
- Users can access all the information pertaining to various layers and perform searches, edits and zoom to specific points of interest.
- Users can also add fields for their own interest
